System Size: 65 kW

Number of Panels: 210 Panels

Technical Details: 61,900 Yearly kWh

Client Overview

Northeast Automatic Sprinkler Co., Inc. specializes in design, construction, repair, renovation, maintenance and testing of all types of fire suppression systems. The company was founded in 1965, and is in its third generation as a family-owned leader in the automatic sprinkler industry.

Challenge

As an environmentally conscious company, Northeast Automatic Sprinkler has a strong commitment to recycling with an emphasis on paper, plastic, oil and metal. However, they were looking for an opportunity to do more, and saw solar as a viable option.

Solution

Northeast Automatic Sprinkler was attracted to solar because of their commitment to being environmentally friendly. Additionally, its commercial office/warehouse building has a large, flat roof, ideal for installing solar panels.

Results

When Northeast Sprinkler realized they had the opportunity for solar to not only cover 100% of the electrical needs of its primary facility, but at least one other building as well, they were thrilled. Northeast anticipates it will funnel a good portion of its savings from solar into upgrades like its most recent lighting project, as well as other energy efficiency initiatives.
